

Maintenance Quality System Database: User Tutorial

Racing Surfaces Testing Laboratory,
Mackenzie Rockefeller

Racing Surfaces
Testing Laboratory

What is the Maintenance Quality System (MQS)?

- The MQS is a database with a user-interface that allows racetrack maintenance crews to document what they do to their tracks on a daily basis
 - Including: **maintenance** routines, **moisture**, **cushion-depth** , and **penetration-depth** measurements
- Ability to see trends in the track over time from the data entered
- Secure access to users with personal logins, and the ability to view all tracks they are associated with from the same account
- Customizable equipment names
- Ability to download all data entered, plus weather data, for any period of time into a simple .csv file
- Can be accessed anywhere with an internet connection

Creating Your Account

1. Contact RSTL with your e-mail address and Racetrack(s) that you wish to interact with
2. Once an administrator (someone with RSTL) creates your account, check your inbox for a verification e-mail
3. Follow the link in that e-mail to create your password

Tips & Tricks:

- Always check your spam/junk folder for the verification e-mail if you cannot find it in your traditional inbox
- The link in the verification e-mail **will expire after 24 hours!** Contact RSTL for a new one to be sent if you need to

Logging in

1. Go to:
<https://www.racingsurfaces.net>
and login with your e-mail address
and newly created password

 **Racing Surfaces
Testing Laboratory**

For pricing and general information about testing and equipment contact us at rsl.services@gmail.com or call (207) 866-1046
For racing surface related technical information contact: Michael "Mick" Peterson Ph.D. at mjpeterson23@gmail.com or call (207) 409-6872

Tips & Tricks:

- You have to include **both https:// AND www.** for the URL to work
- Your **e-mail address is case sensitive** when logging in
- Save URL to Favorites for easy access

Main Track Turf Track Training Track

- This is your menu, the row highlighted in green is the selected screen
- Click on the three bars to close the menu bar, click again to re-open menu

- Choose which track is displayed on the remainder of the dashboard
- The selected track is highlighted in the darker color

Dashboard

- **Today's Racing Card:** a pdf of your racing card
- **Training Time:** shows a graph of training times per day; separated by workout lengths (furlongs)
- **Training Pace:** shows a box-and-whisker plot of training paces over time

Main Track - Maintenance And Test Reports (as of Thursday, October 20, 2022)

RACING / TRAINING

- Today's Racing Card
- Training Time
- Training Pace

ACTION

- Maintenance Report
- Maintenance Data Entry
- Maintenance Manual

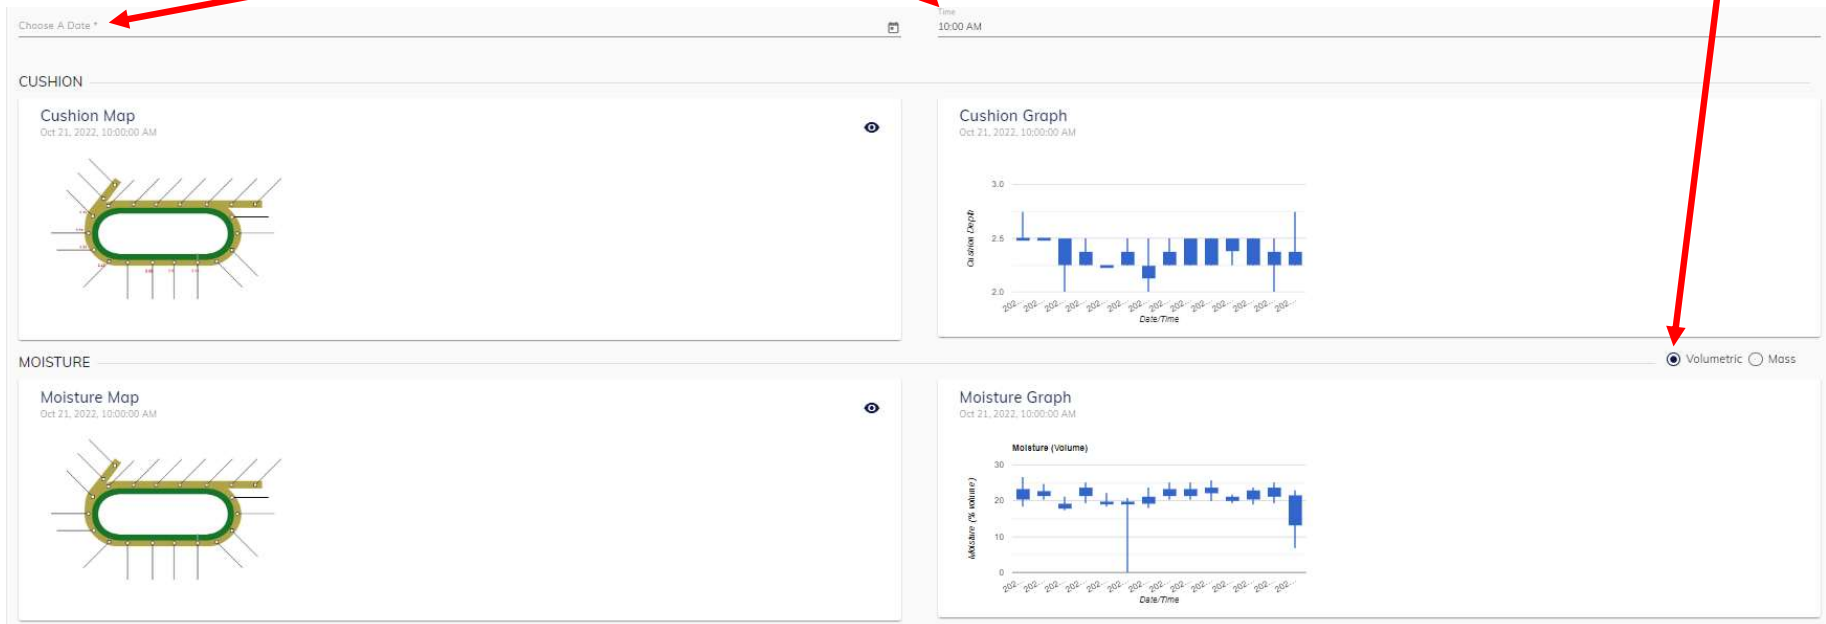

- **Maintenance Report:** search for past maintenance entries AND/OR add a new one
- **Maintenance Data Entry:** start a maintenance data entry for the selected track on the current day
- **Maintenance Manual:** pulls up a pdf, *if* RSTL made a manual for your track

Graphs/Maps on Dashboard

- Choose a date and time to view past maps/graphs

- Tips & Tricks:**
- For moisture measurements, choose “Volumetric” (same units the TDR readings are in)

- The most recent date with data for either moisture or cushion will be the default date shown on maps
 - Example: Oct. 21st, 2022

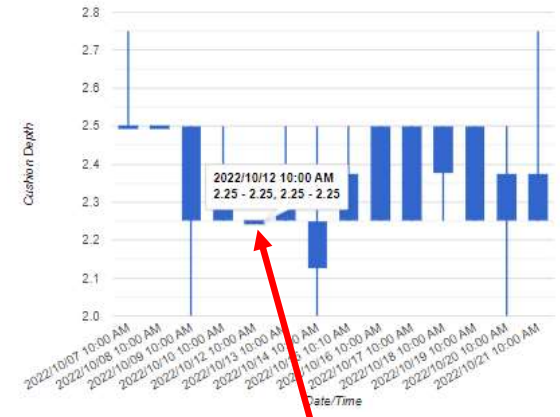

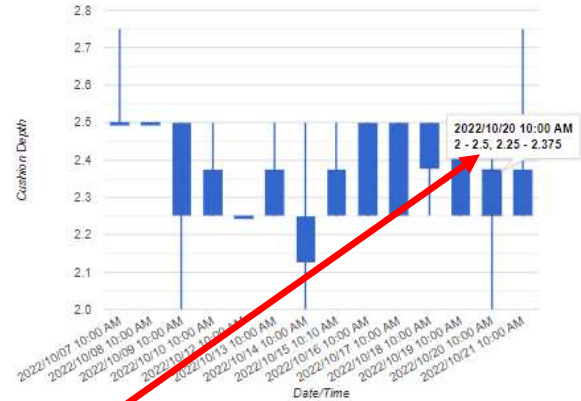

- Box-and-Whisker plots show the last two weeks of measurements.
 - *Learn to read these plots on the next page*

Reading Box-and-Whisker Plots

Tips & Tricks:

- Hover over a box to see the date, time, and details of the data

- Box-and-Whisker plots show the last two weeks of measurements.
 - Box = majority of the data falls in this range
 - Upper whisker = maximum
 - Lower Whisker = minimum

- 2 - 2.5 : Total range of all values, from minimum to maximum
- 2.25 - 2.375 : Range of box, 50% of data lies between the values of 2.25 and 2.375

- A box may not have whiskers if the data range does differ enough
 - Example: If the only value entered is 2.25, that is where the value of the box, and the whiskers, will be

Entering Daily Maintenance

1. Select which track you are entering maintenance data for

2. Click "Add"

Races

Leave A Comment

2. Fill in the respective information

- Race Day: enter the day number of the race meet, *do not fill in if it is a dark day* (dark: no races)
- Races: # of races ran that day, *do not fill in if it is a dark day*
- Enter # of Training Breaks for Maintenance

3. Leave a comment for the day if needed

4. Click "Save"

Entering Daily Maintenance

5. Fill out each row, starting with "Event".
Depending on the equipment chosen, the successive boxes will be either fillable or not.

Examples:

- If "Conditioner" is chosen for equipment, the boxes, "Water x 1000 gallons", and "Yards sand Added" do not apply and cannot be filled.
- If "Water Truck" is chosen, the boxes, "Depth", and "Yards Sand Added" do not apply and cannot be filled.

Tips & Tricks:

- Click on the "Yes" button in the left column to copy the entire previous row.
- You may edit singular columns instead of choosing everything again.
